Powder Technology 92 (1997) 287–289

POWDER TECHNOLOGY

Subject Index of Volume 92

Accelerating flow
  hydrodynamic modeling of vertical accelerating gas–solid flow, 155
Adhesion
  estimation of the surface concentration of adhered particles by color imaging, 147
Adsorption
  investigations on the adsorption properties and porosity of natural and thermally treated dolomite samples, 253
Agglomerates
  bulk density modelling as a means of typifying the microstructure and flow characteristics of cohesive powders, 1
  influence of matrix infiltration on the dispersion kinetics of carbon black agglomerates, 163
Agglomeration
  fluidization of agglomerating particles: influence of the gas temperature and composition on the fluidization of a Li/MgO catalyst, 47
Axial channels
  particle collection efficiency of the rotational particle separator, 89

Binary system modelling
  differential settling of a binary mixture, 171
Bulk density
  bulk density modelling as a means of typifying the microstructure and flow characteristics of cohesive powders, 1

Calcination
  synthesis of high surface area titania powders via basic hydrolysis of titanium(IV) isopropoxide, 233
Catalyst
  fluidization of agglomerating particles: influence of the gas temperature and composition on the fluidization of a Li/MgO catalyst, 47
Cell structure
  toner particle packing in an electrostatic field and its effect on heating in electrophotography, 119
Ceramics
  decrease of the $MgAl_2O_4$ formation temperature, 271
Characterization
  direct measurement of powder cohesion using a torsional device, 25
Circulating beds
  a single radiotracer particle method for the determination of solids circulation rate in interconnected fluidized beds, 53
  a new data processing technique for noisy signals: application to measuring particle circulation times in a draft tube equipped fluidized bed, 111
  single-particle behaviour in circulating fluidized beds, 241
Cohesion testing
  direct measurement of powder cohesion using a torsional device, 25
Cohesivity
  direct measurement of powder cohesion using a torsional device, 25
Collection efficiency
  particle collection efficiency of the rotational particle separator, 89
Colorimetry
  estimation of the surface concentration of adhered particles by color imaging, 147
Coulomb yield criterion
  a fluid mechanistic approach to slow, frictional flow of powders, 61
Cylindrical containers
  numerical simulation of packed beds with monosized spheres in cylindrical containers, 179

Data processing
  a new data processing technique for noisy signals: application to measuring particle circulation times in a draft tube equipped fluidized bed, 111
Differential settling
  differential settling of a binary mixture, 171
Dispersion characteristics
  comparison of stability and dispersion characteristics of organic pigment agglomerates, 17
Dispersion kinetics
  influence of matrix infiltration on the dispersion kinetics of carbon black agglomerates, 163
Distributors
  design of shallow dense fluidized beds subject to uneven slumping, 275
Dolomite
  investigations on the adsorption properties and porosity of natural and thermally treated dolomite samples, 253

Electrophotography
  toner particle packing in an electrostatic field and its effect on heating in electrophotography, 119
Elutriation
  elutriation of fines from gas fluidized beds: mechanisms of elutriation and effect of freeboard geometry, 35
Energy balance
  new considerations on the mass and energy balances in one-dimensional two-phase flow at steady state, 195
Entrainment
  elutriation of fines from gas fluidized beds: mechanisms of elutriation and effect of freeboard geometry, 35
Entrainment rate
  the effect of temperature on particle entrainment rate in a gas fluidized bed, 127
Equations of motion
  a fluid mechanistic approach to slow, frictional flow of powders, 61

Fines
  elutriation of fines from gas fluidized beds: mechanisms of elutriation and effect of freeboard geometry, 35
  on the modelling of the packing of fine particles, 185
Fixing process
  toner particle packing in an electrostatic field and its effect on heating in electrophotography, 119

Elsevier Science S.A.

Flowability
direct measurement of powder cohesion using a torsional device, 25
Flow
bulk density modelling as a means of typifying the microstructure and flow characteristics of cohesive powders, 1
computer controlled shear cell for measurement of flow properties of particulate materials, 135
Fluidization
studies on the inclined jet penetration length in a gas–solid fluidized bed, 205
Fluidized beds
elutriation of fines from gas fluidized beds: mechanisms of elutriation and effect of freeboard geometry, 35
fluidization of agglomerating particles: influence of the gas temperature and composition on the fluidization of a Li/MgO catalyst, 47
a single radiotracer particle method for the determination of solids circulation rate in interconnected fluidized beds, 53
a new data processing technique for noisy signals: application to measuring particle circulation times in a draft tube equipped fluidized bed, 111
the effect of temperature on particle entrainment rate in a gas fluidized bed, 127
studies on the inclined jet penetration length in a gas–solid fluidized bed, 205
analysis of the variables controlling gas jet expansion angles in fluidized beds, 213
a technique for measurement of the jet penetration height in fluidized beds by pressure signal analysis, 223
single-particle behaviour in circulating fluidized beds, 241
design of shallow dense fluidized beds subject to uneven slumping, 275
Food flavouring
estimation of the surface concentration of adhered particles by color imaging, 147
Formation temperature
decrease of the $MgAl_2O_4$ formation temperature, 271
Fragmentation
computer-based examination of self-contained, flexible stereological correction procedures, 101
Freeboard geometry
elutriation of fines from gas fluidized beds: mechanisms of elutriation and effect of freeboard geometry, 35
Friction
a fluid mechanistic approach to slow, frictional flow of powders, 61

Granular flow
effects of geometry on the characteristics of the motion of a particle rolling down a rough surface, 75
Grinding
decrease of the $MgAl_2O_4$ formation temperature, 271

Hydrodynamic diffusion
non-colloidal sedimentation compared with Kynch theory, 81
Hydrodynamic modelling
hydrodynamic modeling of vertical accelerating gas–solid flow, 155
Hydrolysis
synthesis of high surface area titania powders via basic hydrolysis of titanium(IV) isopropoxide, 233

Image analysis
computer-based examination of self-contained, flexible stereological correction procedures, 101
Image processing
estimation of the surface concentration of adhered particles by color imaging, 147
Imaging technology
toner particle packing in an electrostatic field and its effect on heating in electrophotography, 119
Inhomogeneity
detecting powder mixture inhomogeneity for non-normal measurement errors, 9
Ionizing radiation
a single radiotracer particle method for the determination of solids circulation rate in interconnected fluidized beds, 53

Jet expansion angle
analysis of the variables controlling gas jet expansion angles in fluidized beds, 213
Jet penetration length
a technique for measurement of the jet penetration height in fluidized beds by pressure signal analysis, 223
Jets
studies on the inclined jet penetration length in a gas–solid fluidized bed, 205
analysis of the variables controlling gas jet expansion angles in fluidized beds, 213
a technique for measurement of the jet penetration height in fluidized beds by pressure signal analysis, 223

Kruskal–Wallis method
detecting powder mixture inhomogeneity for non-normal measurement errors, 9
Kynch theory
non-colloidal sedimentation compared with Kynch theory, 81

Magnetic resonance imaging
non-colloidal sedimentation compared with Kynch theory, 81
Mass balance
new considerations on the mass and energy balances in one-dimensional two-phase flow at steady state, 195
Matrix infiltration
influence of matrix infiltration on the dispersion kinetics of carbon black agglomerates, 163
Measurement flow
a single radiotracer particle method for the determination of solids circulation rate in interconnected fluidized beds, 53
Mechanical activation
decrease of the $MgAl_2O_4$ formation temperature, 271
Methane coupling
fluidization of agglomerating particles: influence of the gas temperature and composition on the fluidization of a Li/MgO catalyst, 47
Microstructure
bulk density modelling as a means of typifying the microstructure and flow characteristics of cohesive powders, 1
computer-based examination of self-contained, flexible stereological correction procedures, 101
Mineral processing
computer-based examination of self-contained, flexible stereological correction procedures, 101
Mixing flow
une étude expérimentale de la réalisation de mélanges air–solide dans un injecteur de type venturi, 259
Mixture homogeneity
detecting powder mixture inhomogeneity for non-normal measurement errors, 9
Monosized spheres
numerical simulation of packed beds with monosized spheres in cylindrical containers, 179

Noise
a new data processing technique for noisy signals: application to measuring particle circulation times in a draft tube equipped fluidized bed, 111

Non-parametric statistics
detecting powder mixture inhomogeneity for non-normal measurement errors, 9
Numerical simulation
numerical simulation of packed beds with monosized spheres in cylindrical containers, 179

Organic pigment agglomerates
comparison of stability and dispersion characteristics of organic pigment agglomerates, 17

Packed beds
numerical simulation of packed beds with monosized spheres in cylindrical containers, 179
Packing
on the modelling of the packing of fine particles, 185
Particle diameter measurement
particle collection efficiency of the rotational particle separator, 89
Pneumatic conveying
new considerations on the mass and energy balances in one-dimensional two-phase flow at steady state, 195
une étude expérimentale de la réalisation de mélanges air–solide dans un injecteur de type venturi, 259
Polydispersity
non-colloidal sedimentation compared with Kynch theory, 81
Porosity
on the modelling of the packing of fine particles, 185
investigations on the adsorption properties and porosity of natural and thermally treated dolomite samples, 253
Powder flow
a fluid mechanistic approach to slow, frictional flow of powders, 61
Pressure fluctuations
a technique for measurement of the jet penetration height in fluidized beds by pressure signal analysis, 223

Radioactive tracer particles
single-particle behaviour in circulating fluidized beds, 241
Random uniform isotropic fragmentation
computer-based examination of self-contained, flexible stereological correction procedures, 101
Reacting flows
new considerations on the mass and energy balances in one-dimensional two-phase flow at steady state, 195
Rotational separators
particle collection efficiency of the rotational particle separator, 89

Sedimentation
non-colloidal sedimentation compared with Kynch theory, 81
Segregation
detecting powder mixture inhomogeneity for non-normal measurement errors, 9
Separation
particle collection efficiency of the rotational particle separator, 89
Settling
differential settling of a binary mixture, 171
Shear cell
computer controlled shear cell for measurement of flow properties of particulate materials, 135
Single particles
single-particle behaviour in circulating fluidized beds, 241
Slumped beds
design of shallow dense fluidized beds subject to uneven slumping, 275
Stability
comparison of stability and dispersion characteristics of organic pigment agglomerates, 17
Surface area
synthesis of high surface area titania powders via basic hydrolysis of titanium(IV) isopropoxide, 233
Surface flow
effects of geometry on the characteristics of the motion of a particle rolling down a rough surface, 75
Suspensions
differential settling of a binary mixture, 171

Temperature effects
the effect of temperature on particle entrainment rate in a gas fluidized bed, 127
Titania powders
synthesis of high surface area titania powders via basic hydrolysis of titanium(IV) isopropoxide, 233
Tomography
non-colloidal sedimentation compared with Kynch theory, 81
Toner particles
toner particle packing in an electrostatic field and its effect on heating in electrophotography, 119
Transport tubes
hydrodynamic modeling of vertical accelerating gas–solid flow, 155
Two-phase flow
new considerations on the mass and energy balances in one-dimensional two-phase flow at steady state, 195
Two-phase Froude number
analysis of the variables controlling gas jet expansion angles in fluidized beds, 213
Two-phase model
studies on the inclined jet penetration length in a gas–solid fluidized bed, 205

Velocity profiles
differential settling of a binary mixture, 171
Venturi injector
une étude expérimentale de la réalisation de mélanges air–solide dans un injecteur de type venturi, 259

Yield locus tester
computer controlled shear cell for measurement of flow properties of particulate materials, 135
